- Retail floors
- Hotels
- Lobbies
- Conference rooms

PRODUCT SUPPORT

- Specification assistance
- CAD details
- Design consultation
- Color selection assistance
- R&D laboratories
- Applied samples
- Engineered-systems approach

INCRETE VIBRA-STAIN and **INCRETE VIBRA-STAIN SB** are the specially-formulated dye components of the **INCRETE PRO-POLISH SYSTEM** that add vibrant color to interior, polished concrete. **INCRETE VIBRA-STAIN** may be diluted with water or alcohol, whereas **INCRETE VIBRA-STAIN SB**'s powdered metal-complex dyes are specially formulated to be diluted with acetone. Both solutions create a deep-penetrating, semi-transparent color for concrete and overlay surfaces that never chip or peel. With 20 standard vivid colors available, the dyes may be diluted to achieve a variety of hues, and multiple colors may be combined to offer a limitless palette of possibilities. **INCRETE VIBRA-STAIN/VIBRA-STAIN SB** can be applied by spray, brush, sponge or roller, and the surface can be coated several times for a deeper, richer color. Finally, the stained surface is either polished or sealed to protect and enhance the full effect of the stain.

CUSTOMER SUPPORT

- **Technical Support** – Available for product selection and application questions.
- **Product Assistance** – Locate a contractor or distributor. Support literature and in-depth written application instructions.
- **Field Specialists** – Trained field specialists provide consultations and recommendations.
- **Design Consultation** – Complete with showroom and training facility.
